INSTRUCTIONS FOR
“Bernie’s PANICMASTER &
BOW SIMULATOR”
from Master Coach Bernie Pellerite**

Congratulations on the purchase of the “Bernie’s PanicMaster and Bow Simulator”, a laser-equipped multi-function re-trainer. The Bow Simulator, designed for release or finger shooters, is capable of many different functions and, with reasonable care, will last many years. Besides personal use for practicing form and helping to de-program target panic, in a pro shop setting it may be used to demonstrate V-bars, back weights, stabilizers, slings and release aids. Also, with the sight accessory package, (*see Figures 7-8*), different sights can be demonstrated without attaching them to a new bow. With the use of the optional finger adapter (*see Figure 6*), different gloves or finger tabs can be demonstrated. Besides the technical directions enclosed here, we have also enclosed several excerpts from magazine articles dealing with issues such as personality, disciplines, focus, trust, programming, subconscious and conscious minds, and practice regimens, just to name a few. These will help you better understand and apply the benefits the PanicMaster and Bow Simulator can deliver to the serious shooter.

CAUTION: DO NOT DROP! The Bow Simulator should be handled as carefully as a camera, or any other precision instrument. We highly recommend using a sling at all times as the Bow Simulator is a precision device that can become damaged or misaligned from being dropped or mishandled. The laser can become non-functional or the handle could possibly crack. We cannot be responsible for any damage caused by mis-use or abuse.
